

K531

OEM CONTACTLESS READER/WRITER MODULE

K531 is an ISO/IEC 14443 contactless reader/writer module for OEM integration

KEY FEATURES

K531 is dedicated to integrators who need to work with any ISO 14443-A/B cards such as Mifare, DESFire, Calypso and more.

Thanks to its asynchronous serial communication interface, K531 is really easy to operate from any microcontroller or host computer.

The K531 OEM module needs an external antenna to operate. The antenna has to be designed depending on your own application (size requirements, expected operating distance).

SpringCard also offers a basic antenna suitable for most uses, with various serial interface options. SpringCard can also develop and embed a dedicated firmware into the K531 in order to gain the highest performances or to free the host from any card-related processing.

A FEW TYPICAL APPLICATIONS

- Ticketing, transportation, road toll pricing
- RFID tracking, loyalty
- Private money payment, corporate ID card, citizen card
- Physical access control
- And more
